

## Clip Driver Equipment

### *ASSM-2 Dual Station Pass-Through System*

#### General Description

This dual station clip driver machine has two stations and two operators. One station is for one style part and the other station is for a different style part. The front operator loads the plastics parts and front clips. The rear operator loads rear clips and unloads assemblies. Both operators have indicator panels for clip status. Machine has four sets of light curtains to protect both operators from the two stations.
