

## Film Protection

### *SA-3, Film Feeder*

#### General Description

This film feeder is designed to feed a plastic covering over a part for welding. The film will protect the plastic from deforming during welding. It is usually used when the weld area is a seen part and must be blemish free. This feeder can work independently with a welder or can be integrated into a machine. It quickly installs on a welder with a column clamp and a connector to plug into the back of the welder.
